112 **1 Scope**

- This document defines functional extensions to the capabilities defined in ISO/IEC 30118-1:2018
- to meet the requirements of Wi-Fi Easy Setup. It specifies new Resource Types to enable the
- functionality and any extensions to the existing capabilities defined in ISO/IEC 30118-1:2018.

116 2 Normative references

- The following documents are referred to in the text in such a way that some or all of their content
- constitutes requirements of this document. For dated references, only the edition cited applies. For
- undated references, the latest edition of the referenced document (including any amendments)
- 120 applies.

143 3 Terms, definitions, and abbreviated terms

144 3.1 Terms and definitions

- For the purposes of this document, the terms and definitions given in ISO/IEC 30118-1:2018 and
- the following apply.
- 147 ISO and IEC maintain terminological databases for use in standardization at the following
- 148 addresses:
- ISO Online browsing platform: available at https://www.iso.org/obp
- 150 IEC Electropedia: available at http://www.electropedia.org/
- 151 **3.1.1**
- 152 Easy Setup
- process of configuring an Enrollee (3.1.3) using a Mediator (3.1.5) by transferring of essential
- information to the Enrollee (3.1.3)
- 155 **3.1.2**
- 156 Easy Setup Enrollment
- step during Easy Setup in which the Enrollee (3.1.3) is contacted by the Mediator (3.1.5) to
- 158 configure the Enroller's (3.1.4) information by means of accessing Easy Setup (3.1.1) Resources
- 159 **3.1.3**
- 160 Enrollee
- device that needs to be configured and connected. E.g. Air-conditioner, Printer
- 162 **3.1.4**
- 163 Enroller
- target network entity to which the Enrollee (3.1.3) connects. E.g. Wi-Fi AP
- 165 **3.1.5**
- 166 Mediator
- logical function that enables the Enrollee (3.1.3) to connect to the target network (i.e. Enroller
- 168 (3.1.4))
- 169 Note 1 to Entry: The Mediator transfers configuration information to the Enrollee. E.g. Mobile Phone
- 170 3.2 Abbreviated terms
- 171 **3.2.1**
- 172 **CID**
- 173 Company Identifier (ID)
- **3.2.2**
- 175 **IE**
- 176 Information Element
- **3.2.3**
- 178 Soft AP
- 179 Software Enabled Access Point
- 180 3.2.4
- 181 **TLV**
- 182 type-length-value

4 Document conventions and organization

4.1 Conventions

- In this document a number of terms, conditions, mechanisms, sequences, parameters, events, states, or similar terms are printed with the first letter of each word in uppercase and the rest lowercase (e.g., Network Architecture). Any lowercase uses of these words have the normal
- technical English meaning.

189 **4.2 Notation**

183

184

- In this document, features are described as required, recommended, allowed or DEPRECATED as follows:
- 192 Required (or shall or mandatory)(M).
- These basic features shall be implemented to comply with Core Architecture. The phrases "shall not", and "PROHIBITED" indicate behaviour that is prohibited, i.e. that if performed means the implementation is not in compliance.
- 196 Recommended (or should)(S).
- These features add functionality supported by Core Architecture and should be implemented.
 Recommended features take advantage of the capabilities Core Architecture, usually without imposing major increase of complexity. Notice that for compliance testing, if a recommended feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines. Some recommended features could become requirements in the future. The phrase "should not" indicates behaviour that is permitted but not recommended.
- 203 Allowed (may or allowed)(O).
- These features are neither required nor recommended by Core Architecture, but if the feature is implemented, it shall meet the specified requirements to be in compliance with these quidelines.
- 207 DEPRECATED.
- Although these features are still described in this document, they should not be implemented except for backward compatibility. The occurrence of a deprecated feature during operation of an implementation compliant with the current document has no effect on the implementation's operation and does not produce any error conditions. Backward compatibility may require that a feature is implemented and functions as specified but it shall never be used by implementations compliant with this document.
- 214 Conditionally allowed (CA)
- 215 The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is allowed, otherwise it is not allowed.
- 217 Conditionally required (CR)

- The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is required. Otherwise the definition or behaviour is allowed as default unless specifically defined as not allowed.
- Strings that are to be taken literally are enclosed in "double quotes".
- 223 Words that are emphasized are printed in italic.

5 Overview

224

225

239

241

242

243

246

5.1 Introduction

- This document describes a way to setup and configure a new OCF Device, using an already configured OCF Device or onboarding tool.
- The described setup and configure mechanism is optional and other mechanisms are allowed to be used.
- Specifically, this method allows the transferring of essential information to the new Device, which includes:
- Local network connection information, e.g. in case of Wi-Fi it will be Wi-Fi access point
 information.
- 234 Device Configuration: Additional Device configuration information.
- Easy Setup can be enhanced in future by incorporating other suitable technologies.
- Annex A specifies the Resource Type definitions using the schema defined in the OpenAPI specification as the API definition language that shall be followed by an OCF Device realizing the
- 238 Resources specified in this document.

5.2 Architecture

240 Figure 1 shows the deployment architectural approach.

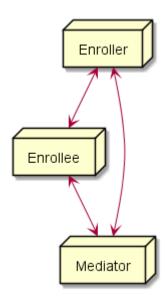

Figure 1 - Easy Setup deployment architecture

Easy Setup defines the following roles: Enrollee, Enroller, and Mediator. Please refer to clause 3 for the definitions thereof.

5.3 Example Scenario

- The following scenario presents a typical setup case.
- The configuration information and steps taken may vary depending on the Device's type and status.

- 1) The Enrollee enters Easy Setup mode (when the Device is unboxed for the first time, it may be in this mode by default).
- 251 2) The Mediator discovers and connects to the Enrollee.
- 252 3) The Mediator performs Security Provisioning of the Enrollee.
- 253 4) The Mediator transmits Wi-Fi Setting Information to the Enrollee.
- Using the information received from the Mediator, the Enrollee connects to the Enroller (Wi-Fi AP).

6 Resource model

6.1 Introduction

256

257

267

268

269

270

273

275

- 258 Devices capable of Easy Setup shall support the following Resource Types.
- 1) EasySetup Resource Type
- 260 2) WiFiConf Resource Type
- 261 3) DevConf Resource Type
- The EasySetup Resource Type is a Collection Resource and shall contain Links to instances of at least WiFiConf and DevConf. A vendor may add links to other Resource Types. The relationship between the EasySetup Resource Type and linked Resources is shown in Figure 2.
- NOTE The EasySetup Resource Type supports the batch Interface (oic.if.b) which allows for efficient data delivery with a single request rather than multiple requests to each linked Resource.

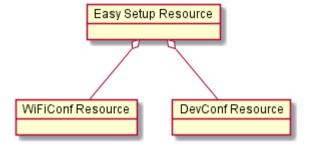

Figure 2 - Easy Setup Resource Types

6.2 EasySetup Resource

6.2.1 Overview

The EasySetup Resource stores useful information including current status of Enrollee and last error code which was produced in the process of Easy Setup.

6.2.2 Resource

The Easy Setup Resource Type is as defined in Table 1.

Table 1 - EasySetup Resource Type

Example URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/Easy SetupResURI	EasySetup	oic.r.easysetup, oic.wk.col	oic.if.baseline, oic.if.ll, oic.if.b	Top level Resource for Easy Setup. Indicates easy setup status.	N/A

r r	
	The Resource
	properties exposed are
	listed in Table 2.

278

Table 2 defines the details for the "oic.r.easysetup" Resource Type.

Table 2 - "oic.r.easysetup" Resource Type definition

Property title	Property name	Value type	Value rule	Unit	Access mode	Mandatory	Description
Easy Setup Provisioning Status	ps	integer	enum	N/A	R	Yes	Easy setup provisioning status of the Device 0: Need to Setup, 1: Connecting to Enroller, 2: Connected to Enroller, 3: Failed to Connect to Enroller, 4~254: Reserved, 255: EOF
Last Error Code	lec	integer	enum	N/A	R	Yes	Indicates a failure reason if it fails to connect to Enroller 0: No error, 1: Given SSID is not found, 2: Wi-Fi password is wrong, 3: IP address is not allocated, 4: NO internet connection, 5: Timeout, 6: Wi-Fi Auth Type is not supported by the Enrollee, 7: Wi-Fi Encryption Type is not supported by the Enrollee, 8: Wi-Fi Auth Type is wrong (failure while connecting to the Enroller), 9: Wi-Fi Encryption Type is wrong (failure while connecting to the Enroller), 10~254: Reserved, 255: Unknown error.
Connect	cn	array of integer	N/A	N/A	RW	Yes	Array of connection types to trigger Enrollee to initiate connection: 1: Wi-Fi, 2: Other transport to be added in a future (e.g. BLE))
Links	links	array	N/A	N/A	R	Yes	Array of links that are Wi Fi Conf and Dev Conf Resource.

279280

Enrollee shall set the following as default values (for example, when Device is unboxed first time):

- 281 "ps" equal to 0.
- 282 "lec" equal to 0.
- 283 "cn" equal to an empty array.
- 284 6.3 WiFiConf Resource Type
- 285 6.3.1 Introduction
- The WiFiConf Resource Type stores information to help an Enrollee to connect to an existing Wi-Fi AP.
- 288 6.3.2 Resource Type

291

292

293

The WiFiConf Resource Type is as defined in Table 3.

Table 3 - WiFiConf Resource Type

Example URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/WiFi ConfResURI	WiFiConf	oic.r.wificonf	oic.if.baseline, oic.if.rw	Contains Wi-Fi related properties The Resource properties exposed are listed in Table 4.	N/A

Table 4 defines the details for the "oic.r.wificonf" Resource Type.

Table 4 - "oic.r.wificonf" Resource Type definition

Property title	Property name	Value type	Value rule	Unit	Access mode	Mandatory	Description
Supported Wi-Fi Mode Type	swmt	array of string	enum	N/A	R	Yes	Supported Wi-Fi modes by Enrollee. Can be multiple. ("A", "B", "G", "N", "AC")
Supported Wi-Fi Frequency	swf	array of string	Refer to description for valid values.	N/A	R	Yes	Supported Wi-Fi frequencies by Enrollee. Can be multiple. ("2.4G", "5G")
Target Network Name	tnn	string	N/A	N/A	RW	Yes	Target network name (SSID of Wi-Fi AP i.e. enroller)
Credential	cd	string	N/A	N/A	RW	No	Credential information of Wi-Fi AP (Password used to connect to enroller).
Wi-Fi Auth Type	wat	string	enum	N/A	RW	Yes	Wi-Fi auth type ("None", "WEP", "WPA_PSK", "WPA2_PSK")
Wi-Fi Encryption Type	wet	string	enum	N/A	RW	Yes	Wi-Fi encryption type ("None", "WEP_64", "WEP_128", "TKIP", "AES", "TKIP_AES")

Supported Wi-Fi Auth Type	swat	array of string	enum	N/A	R	Yes	Supported Wi-Fi Auth types. Can be multiple. ("None", "WEP", "WPA_PSK", "WPA2_PSK")
Supported Wi-Fi Encryption Type	swet	array of string	enum	N/A	R	Yes	Supported Wi-Fi Encryption types. Can be multiple. ("None", "WEP-64", "WEP_128", "TKIP", "AES", "TKIP_AES")

296

297

298

299

300

6.4 DevConf Resource Type

6.4.1 Introduction

The DevConf Resource Type stores Device configuration information required in Wi-Fi Easy Setup.

6.4.2 Resource Type

The DevConf Resource Type is as defined in Table 5

Table 5 - DevConf Resource Type

Example URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/Dev ConfResURI	DevConf	oic.r.devconf	oic.if.baseline, "oic.if.r"	Stores device configuration information required in Easy Setup process The Resource properties exposed are listed in Table 6.	N/A

301

302

303

Table 6 defines the details for the "oic.r.devconf" Resource Type.

Table 6 - "oic.r.devconf" Resource Type definition

Property title	Property name	Value type	Value rule	Unit	Access mode	Mandatory	Description
Device Name	dn	one of: string or array of object	N/A	N/A	R	Yes	Indicates a pre-configured device name in language indicated by "dl" in "/oic/con". or An array of objects where each object has a language field (containing an IETF RFC 5646 language tag) and a value field containing the pre-configured device name in the indicated language. The pre-configured device name is presented by enrollee to mediator during easy-setup process.

7 Network and connectivity

- Both the Mediator and Enrollee communicate via a common connectivity (e.g. Wi-Fi).
- If using Wi-Fi for Easy Setup then the Enrollee shall have capability to act as a Soft AP. A Soft AP shall support the access point requirements defined by IEEE 802.11:2016.

309 8 Functional interactions

8.1 Onboarding, Provisioning and Configuration

- The Mediator may be present as a standalone function or in conjunction with other functions or
- services such as AMS as part of an OBT (Onboarding Tool); please refer to the ISO/IEC 30118-
- 313 2:2018.

305

310

333

314 8.2 Resource discovery

- The Mediator connects to the Enrollee via a mutually supported connection.
- When in Easy Setup phase, if using Wi-Fi as the connectivity between the Enrollee and the Mediator
- then the Enrollee shall make itself discoverable as a Soft AP. The Soft AP has additional availability
- constraints which are documented in ISO/IEC 30118-2:2018.

319 8.3 Retrieving and Updating Easy Setup Resources

- The Enrollee shall expose Easy Setup Resources such that a Mediator is able to discover them
- using standard OCF Resource discovery methods (i.e. via a RETRIEVE on /oic/res); see the
- 322 ISO/IEC 30118-1:2018, clause 11.3.
- Easy Setup Resources shall expose only secure Endpoints (e.g. CoAPS); see the ISO/IEC 30118-
- 324 1:2018, clause 10.
- The Mediator may RETRIEVE a Resource within the Easy Setup Collection or the Collection itself
- to check the Enrollee's status at any stage of Easy Setup. This applies only when the Enrollee &
- 327 the Mediator are on a common network.
- The Mediator may UPDATE Resource Property(-ies) on the Enrollee. Upon receipt of the request
- from the Mediator the Enrollee shall update its current Resource Property Values, and shall perform
- any required action. For example, if the "cn" Property of "EasySetup" Resource is updated by the
- Mediator, to indicate connection to Wi-Fi, the Enrollee shall start the connection to Enroller.
- For details of Easy Setup Resources refer to clause 6.

8.4 Error Handling

- The "lec" Property of the EasySetup Resource (i.e. "oic.r.easysetup") is used to indicate the error
- that occurred in the Easy Setup process while trying to connect to the Enroller (using the information provided by the Mediator in WiFiConf Resource):
- The Enrollee shall set "lec" Property to 1, if it fails to connect because it can't find the SSID.
- The Enrollee shall set "lec" Property to 2, if it fails to connect due to wrong credential (password) information.
- The Enrollee should set "lec" Property to 6, if the Auth type is not supported by the Enrollee.
- The Enrollee should set "lec" Property to 7, if the Encryption type is not supported by the Enrollee.
- The Enrollee should set "lec" Property to 8, if it fails to connect due to wrong Auth type information (even though it's supported by the Enrollee).

- The Enrollee should set "lec" Property to 9, if it fails to connect due to wrong Encryption type information (even though it's supported by the Enrollee).
- When using Wi-Fi as the connectivity between the Enrollee and Mediator, if the Enrollee fails to connect to the Enroller, it shall again make itself discoverable as a Soft AP (in case it destroyed its Soft AP earlier).

350 8.5 Example Easy Setup Flow

Figure 3 shows an example Easy Setup flow for informative purposes:

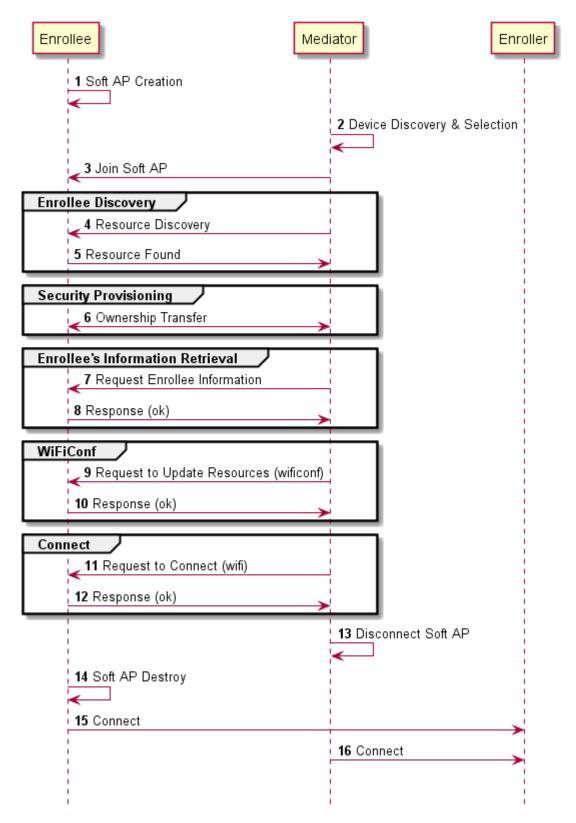

Figure 3 - Easy Setup Flow (Informative)

The example flow in Figure 1 Figure 3 undergoes security provisioning (step 6) during Easy Setup.

Alternatively, security provisioning can be done before Enrollee Discovery (steps 4 and 5) if preferred. Please refer to the ISO/IEC 30118-2:2018 for more information on the different scenarios.

358 8.6 Easy Setup SSID Tags

If using Wi-Fi as the connectivity between the Enrollee and the Mediator then the Enrollee's Soft AP SSID should contain exactly one of the following Easy Setup SSID tags:

- 361 "OCF "
- Prefix tag that has to be at the beginning of the SSID.
- 363 Example: OCF_MySSID
- 364 " OCF"

368

369

375

376

377

388

- Suffix tag that has to be at the end of the SSID.
- 366 Example: MySSID OCF
- These tags are case sensitive.

8.7 Easy Setup Information Element

8.7.1 Overview

If using Wi-Fi as the connectivity between the Enrollee and the Mediator then the Enrollee's Soft AP beacon should contain the Easy Setup Information Element. The information element provides additional information about the device such as a friendly name or device manufacturer for the mediator application. The mediator application can then use this information to provide a better user experience.

8.7.2 OCF Device Information Element (IE)

The Easy Setup Information Element has the structure shown in Figure 4

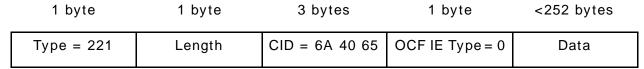

Figure 4 - Easy Setup Information Element Definition

- Type is a unique id allocated by the IEEE registrar to identify different information elements
 from each other. The Easy Setup Information Element shall have a Type value of 221 which is
 standard vendor specific information element.
- 381 Length shall indicate the total size of CID, OCF IE Type, and Data in bytes.
- Company ID (CID) is a unique 24-bit identifier for a specific company or organization. The Easy Setup Information Element shall have a CID value of 6A 40 65.
- OCF IE Type is the identifier of the specific IE within OCF. The OCF IE Type shall be set to 0 for Easy Setup.
- Data is a set of type-length-value (TLV) structures that represent the device information in Table
 1. The length of this field shall be less than 252 bytes.

Each TLV has the structure shown in Figure 5.

Type	Length	Value

Figure 5 - Type-Length-Value Structure

- 391 Type shall indicate the type of the field from Table 7.
- 392 Length shall indicate the length of the Value in bytes.
- 393 Value shall represent the corresponding information for specific TLV type from Table 7.
- Data is a set of TLVs as defined in Table 7.

Table 7 – Easy Setup Information Element TLVs

Туре	Length (bytes)	Value	Description of TLV	# of Occurrences in IE or IEC	Required
1	<65	Friendly name of the device	Device Friendly Name	1	Υ
2	<27	Device Type	Device type/Class	>=1	Υ
3	<65	Name of Device Manufacturer	Manufacturer Name	1	Υ
4	<43	Language tag for strings	See IETF RFC 5646	1	Υ
5	16	Protocol Independent ID in network byte order	See ISO/IEC 30118-1:2018	1	Y
101	<65	Device Type/Class	Device Type as string	>=0	N

396 397

398

399

400

401

402

403

404

405

406

407

390

395

The TLVs may be set in any order inside an IE or IEC. All strings shall be UTF-8 encoded and shall not include a null terminator. All TLVs in Table 7 with a required value of "Y" shall be included in the IE or IEC (if multiple IEs are required). The value of each TLV shall meet the length requirements specified in Table 1.

8.7.2.1 Device Friendly Name (Type 1)

User readable string representing the friendly name of the device that is beaconing and ready to undergo Easy Setup. This should match "n" from "oic.wk.d" as defined in the ISO/IEC 30118-1:2018.

This string is in the same language specified in the type 4 TLV.

8.7.2.2 Device Type (Type 2)

Device type shall be the shortened form of Device Type as specified in the ISO/IEC 30118-5:2018. For example:

- 408 409 410
- Device Type as specified in the ISO/IEC 30118-5:2018: "oic.d.airconditioner"
- 411 Device Type as specified in a type 2 TLV: "airconditioner"
- In cases where the device supports multiple functions, several type 2 TLVs may be included to represent each function of the device.

- 414 If the device does not support any of the functions as specified in the ISO/IEC 30118-5:2018, at
- least one type 101 TLV shall be included. Type 101 TLV contains a user readable string in the
- same language specified in the type 4 TLV. (Éx: "Lock").
- 417 If the device supports more than one function, a mix of type 2 and type 101 TLVs may be used
- depending on which functions are defined in the ISO/IEC 30118-5:2018.

419 8.7.2.3 Device Manufacturer Name (Type 3)

- 420 User readable string representing the manufacturer name of the device that is beaconing and ready
- to undergo Easy Setup. This should match "mnmn" Property from "oic.wk.p" as defined in the
- 422 ISO/IEC 30118-1:2018.
- This string is in the same language specified in the type 4 TLV.

424 **8.7.2.4** Language Tag (Type 4)

- The language of all strings shall be specified in a type 4 TLV. The value of the type 4 TLV shall
- contain a language tag as described in IETF RFC 5646 (Ex: "en-us"). If the actual length of the
- 427 language tag exceeds 42 bytes the manufacturer shall exclude subtags on the language tag until
- it is less than 43 bytes.
- 429 Please see 8.7.2.8 for information on supporting multiple languages.
- If an IE contains a TLV that is a string (i.e. type 1, type 3 or type 101), then a type 4 TLV
- corresponding to the language of the string(s) shall also be present in the IE.

432 8.7.2.5 Protocol Independent ID (Type 5)

- This shall match "piid" from "oic.wk.d" as defined in the ISO/IEC 30118-1:2018.
- The piid in the TLV shall be in network byte order.

435 8.7.2.6 Multiple Information Elements

- Additional Easy Setup IEs may be present in the Soft AP beacon in the following situations:
- The total size of the TLVs is larger than the size of Data as defined in an Easy Setup Information
- Support for multiple languages is necessary.
- Two or more Easy Setup Information Elements are referred to as an Information Element Collection
- 441 (IEC).

442

8.7.2.7 IEC for Large TLV Size Support

- If a TLV or set of TLVs will not fit into the current IE, a manufacturer may add additional Easy Setup
- IEs to contain the TLV/s thereby creating or extending an IEC. The additional IE shall contain the
- following fields as described in 8.7.2:
- 446 Type
- 447 Length
- 448 CID
- 449 OCF IE Type
- If an IE contains a TLV that is a string (i.e. type 1, type 3 or type 101), then a type 4 TLV corresponding to the language of the string(s) shall also be present in the IE.

452 8.7.2.8 IEC for Multiple Language Support

- A manufacturer may include additional Easy Setup IEs to support multiple languages in the Soft
- AP beacon. In the case that a manufacturer needs to provide device information in more than one
- language, they shall include an additional copy of the IE/IEC for each additional language. Each
- additional IE/IEC shall include all of the mandatory TLVs defined in 8.7.2.

457 **9 Security**

A Device shall meet the Wi-Fi Easy Setup security requirements specified in ISO/IEC 30118-2:2018.

A.2.5 Property definition

605

607

608

609

610

Table A.2 defines the Properties that are part of the "oic.r.devconf" Resource Type.

Table A.2 – The Property definitions of the Resource with type "rt" = "oic.r.devconf".

Property name	Value type	Mandatory	Access mode	Description
id	multiple types: see schema	No	Read Write	
n	multiple types: see schema	No	Read Write	
dn	multiple types: see schema	Yes	Read Write	
rt	array: see schema	No	Read Only	Resource Type of the Resource.
if	array: see schema	No	Read Only	The OCF Interfaces supported by this Resource.

A.2.6 CRUDN behaviour

Table A.3 defines the CRUDN operations that are supported on the "oic.r.devconf" Resource Type.

Table A.3 – The CRUDN operations of the Resource with type "rt" = "oic.r.devconf".

A.3 Easy Setup Collection

A.3.1 Introduction

The Easy Setup Resource stores useful information including the current status of unboxing a
Device and the last error code which are produced in the process of easy setup.
Note that the Easy Setup Resource is a Collection Resource, which contains Links to WiFiConf, and DevConf Resources and may additionally contain Links to other Resources.

611

Property definition A.3.5

Table A.4 defines the Properties that are part of the "oic.r.easysetup, oic.wk.col" Resource Type.

Table A.4 – The Property definitions of the Resource with type "rt" = "oic.r.easysetup, oic.wk.col".

Property name	Value type	Mandatory	Access mode	Description
rep	object: see schema	Yes	Read Write	The response payload from a single Resource.
href	multiple types: see schema	Yes	Read Write	
rep	object: see schema	Yes	Read Write	The response payload from a single Resource.
href	multiple types: see schema	Yes	Read Write	
links	array: see schema	No	Read Write	A set of OCF Links.

A.3.6 CRUDN behaviour

1246

1249

1250

1251

1252

1255

1256

1258

1260

Table A.5defines the CRUDN operations that are supported on the "oic.r.easysetup, oic.wk.col" Resource Type.

Table A.5 – The CRUDN operations of the Resource with type "rt" = "oic.r.easysetup, oic.wk.col".

Create	Read	Update	Delete	Notify
	get	post		observe

A.4 Wi-Fi Configuration

A.4.1 Introduction

WiFiConf Resource stores essential information to help an unboxing Device to an existing Wi-Fi AP.

A.4.2 Example URI

1257 /WiFiConfResURI

A.4.3 Resource type

The Resource Type is defined as: "oic.r.wificonf".

A.4.4 OpenAPI 2.0 definition

A.4.5 Property definition

1588

1589

1590

1591

Table A.6 defines the Properties that are part of the "oic.r.wificonf" Resource Type.

Table A.6 – The Property definitions of the Resource with type "rt" = "oic.r.wificonf".

Property name	Value type	Mandatory	Access mode	Description
if	array: see schema	No	Read Only	The OCF Interfaces supported by this Resource.
cd	string	No	Read Write	Indicates credential information of Wi-Fi AP.
wat	string	Yes	Read Write	Indicates Wi-Fi Auth Type.
swat	array: see schema	Yes	Read Only	Indicates supported Wi-Fi Auth types. It can be multiple.
tnn	string	Yes	Read Write	Indicates Target Network Name (SSID of Wi-Fi AP).
wet	string	Yes	Read Write	Indicates Wi-Fi Encryption Type.
id	multiple types: see schema	No	Read Write	
rt	array: see schema	No	Read Only	Resource Type of the Resource.
swmt	array: see schema	Yes	Read Only	Indicates supported Wi-Fi mode types. It can be multiple.
swf	array: see schema	Yes	Read Only	Indicates Supported Wi-Fi frequencies by the Enrollee. Can be multiple. Valid values are ("2.4G", "5G").
n	multiple types: see schema	No	Read Write	
swet	array: see schema	Yes	Read Only	Indicates supported Wi-Fi Encryption types. It can be multiple.
wat	multiple types: see schema	Yes	Read Write	Indicates Wi-Fi Auth Type.

cd	string	No	Read Write	Indicates credential information of Wi-Fi AP.
tnn	string	Yes	Read Write	Indicates Target Network Name (SSID of Wi-Fi AP).
wet	multiple types: see schema	Yes	Read Write	Indicates Wi-Fi Encryption Type.

1592 A.4.6 CRUDN behaviour

Table A.7 defines the CRUDN operations that are supported on the "oic.r.wificonf" Resource Type.

Table A.7 – The CRUDN operations of the Resource with type "rt" = "oic.r.wificonf".

Create	Read	Update	Delete	Notify
	get	post		observe
