165 **1 Scope**

- This document provides detailed mapping information to provide equivalency between AllJoyn defined Interfaces and OCF defined Resources.
- This document provides mapping for Device Types (AllJoyn to/from OCF), identifies equivalent
- OCF Resources for both mandatory and optional AllJoyn interfaces and for each interface defines
- the detailed Property by Property mapping using OCF defined extensions to JSON schema to
- 171 programmatically define the mappings.

172 1 Normative references

- The following documents are referred to in the text in such a way that some or all of their content
- 174 constitutes requirements of this document. For dated references, only the edition cited applies. For
- undated references, the latest edition of the referenced document (including any amendments)
- 176 applies.

195 2 Terms and definitions

- For the purposes of this document, the terms and definitions given in ISO/IEC 30118-1:2018 and
- the following apply.
- 198 ISO and IEC maintain terminological databases for use in standardization at the following
- 199 addresses:

202

203

- 200 ISO Online browsing platform: available at https://www.iso.org/obp
- 201 IEC Electropedia: available at http://www.electropedia.org/

3 Document conventions and organization

3.1 Conventions

- In this document a number of terms, conditions, mechanisms, sequences, parameters, events,
- states, or similar terms are printed with the first letter of each word in uppercase and the rest

lowercase (e.g., Network Architecture). Any lowercase uses of these words have the normal 206 technical English meaning. 207

3.2 **Notation** 208

- In this document, features are described as required, recommended, allowed or DEPRECATED as 209 follows: 210
- 211 Required (or shall or mandatory).
- These basic features shall be implemented to comply with the Mapping Specification. The 212 phrases "shall not", and "PROHIBITED" indicate behaviour that is prohibited, i.e. that if 213 performed means the implementation is not in compliance. 214
- Recommended (or should). 215
- These features add functionality supported by the Mapping Specification and should be 216 implemented. Recommended features take advantage of the capabilities the Mapping 217 Specification, usually without imposing major increase of complexity. Notice that for compliance 218 testing, if a recommended feature is implemented, it shall meet the specified requirements to 219 be in compliance with these guidelines. Some recommended features could become 220 requirements in the future. The phrase "should not" indicates behaviour that is permitted but 221 not recommended. 222
- Allowed (or allowed). 223
- These features are neither required nor recommended by the Mapping Specification, but if the 224 feature is implemented, it shall meet the specified requirements to be in compliance with these 225 guidelines. 226
- Conditionally allowed (CA) 227
- The definition or behaviour depends on a condition. If the specified condition is met, then the 228 definition or behaviour is allowed, otherwise it is not allowed. 229
- Conditionally required (CR) 230
- The definition or behaviour depends on a condition. If the specified condition is met, then the 231 definition or behaviour is required. Otherwise the definition or behaviour is allowed as default 232 unless specifically defined as not allowed. 233
- **DEPRECATED** 234

235

237

238

239 240

243

244

- Although these features are still described in this document, they should not be implemented except for backward compatibility. The occurrence of a deprecated feature during operation of 236 an implementation compliant with the current document has no effect on the implementation's operation and does not produce any error conditions. Backward compatibility may require that a feature is implemented and functions as specified but it shall never be used by implementations compliant with this document.
- Strings that are to be taken literally are enclosed in "double quotes". 241
- Words that are emphasized are printed in *italic*. 242

The ory of operation 4

Interworking approach 4.1

- The interworking between AllJoyn defined interfaces and OCF defined Resource Types is modelled 245 using the derived model syntax described in Derived Models for Interoperability between IoT 246
- Ecosystems. Determination of the minimum set of AllJoyn interfaces for which equivalency is 247
- required within the OCF data model was done by listing the set of interfaces required for each of 248

the device types defined by the CDM Project inside of AllJoyn. Where the AllJoyn interface

supports methods then an actuation design pattern is applied.

251 4.2 Mapping syntax

252 4.2.1 Introduction

- 253 Within the defined syntax for derived modelling used by this document there are two blocks that
- define the actual Property-Property equivalence or mapping. These blocks are identified by the
- keywords "x-to-ocf" and "x-from-ocf". Derived Models for Interoperability between IoT Ecosystems
- does not define a rigid syntax for these blocks; they are free form string arrays that contain pseudo-
- coded mapping logic.
- 258 Within this document we apply the rules defined in clause 5.2 to these blocks to ensure consistency
- and re-usability and extensibility of the mapping logic that is defined.

260 4.2.2 General

262

All statements are terminated with a carriage return.

4.2.3 Value assignment

- The equals sign (=) is used to assign one value to another. The assignee is on the left of the
- operator; the value being assigned on the right.

265 4.2.4 Property naming

- All Property names are identical to the name used by the original model; for example, from the
- OCF Temperature Resource the Property name "temperature" is used whereas when referred to
- the derived ecosystem then the semantically equivalent Property name is used.
- When the same name is used by both OCF and the derived ecosystem for semantically equivalent
- values then the name of the OCF defined Property is prepended by the ecosystem designator "ocf"
- to avoid ambiguity (e.g. "ocf.step").

272 **4.2.5** Arrays

- 273 An array element is indicated by the use of square brackets "[]" with the index of the element
- contained therein, e.g. range[1]. All arrays start at an index of 0. If an entire array is being
- referenced then no index is included, e.g. selectablehumiditylevels[].

276 4.2.6 Default mapping

- There are cases where the specified mapping is not possible as one or more of the Properties
- being mapped is optional in the source model. In all such instances a default mapping is provided.
- The default map is indicated by the prepending of an "otherwise:" modifier to the assignment. (e.g.
- 280 "otherwise: step = 1").

281 4.2.7 Conditional mapping

- When a mapping is dependent on the meeting of other conditions then the syntax:
- if "condition", "mapping".
- 284 Is applied.
- E.g. if step > 0, ocf.step = step.

286 **4.2.8** Loops

- When a mapping can be represented by a repeated loop governed by some condition then the
- 288 syntax:

- for "initialize", "condition", "increment": "mapping"
- 290 Where:
- "initialize" is an initial local loop control variable setting.
- "condition" is the loop controller, the loop repeats until the condition evaluates to "false".
- "increment" allows for update of the control variable, if omitted an increment of "1" is assumed.
- 294 Is applied.

296

304

305

306

307

308

309

310

311

E.g. for x=0, x < size of(supported modes): ocf.supported modes[x] = modearray[supported modes[x]]

4.2.9 Method invocation

The invocation of a method or remote procedure call (RPC) from the derived ecosystem as part of the mapping from an OCF Resource is indicated by the use if a double colon "::" delimiter between the applicable resource, service, interface or other construct identifier and the method or RPC name. The method name always includes trailing parentheses which would include any parameters should they be passed.

For example, when dealing with the switchon() method from AllJoyn this gives a complete method invocation as: operation.oncontrol::switchon().

5 Device type mapping

5.1 All Joyn device types to OCF device types

Table 1 captures the equivalency mapping between AllJoyn defined Device Types (see AllJoyn Common Data Model Interface Definitions) and OCF defined Device Types (see Table 10-1 in ISO/IEC 30118-5:2019). The minimum interface set for the AllJoyn definitions is provided in the HAE Theory of Operation; the minimum Resource sets for each OCF Device is provided in ISO/IEC 30118-5:2019.

Table 1 - AllJoyn to OCF device type mapping

Classification	AllJoyn Device Type	AllJoyn ID	OCF Device Type
Air Care	Air Conditioner	5	oic.d.airconditioner
	Air Purifier	9	oic.d.airpurifier
	Air Quality Monitor	11	oic.d.airqualitymonitor
	Dehumidifier	8	oic.d.dehumidifier
	Humidifier	7	oic.d.humidifier
	Electric Fan	10	oic.d.fan
	Thermostat	6	oic.d.thermostat
Fabric Care	Clothes Washer	12	oic.d.washer
	Clothes Dryer	13	oic.d.dryer
	Clothes Washer-Dryer	14	oic.d.washerdryer
Food Preservation	Refrigerator	2	oic.d.refrigerator
	Ice-Maker	4	oic.r.icemaker (maps to Resource)
	Freezer	3	oic.d.freezer
Food Preparation	Oven	17	oic.d.oven

	Cooktop	18	oic.d.cooktop
	Cookerhood	19	oic.d.cookerhood
	Food probe	20	oic.d.foodprobe
Dish Care	Dishwasher	15	oic.d.dishwasher
Floor Care	Robot Cleaner	16	oic.d.robotcleaner
Entertainment	Television	21	oic.d.tv
	Set Top Box (STB)	22	oic.d.stb

5.2 OCF device types with no AllJoyn equivalent

Table 2 captures the Device Types defined by OCF have no direct equivalent in AllJoyn, they shall all be mapped to an AllJoyn Device Type of "Other" (Id of "1").

Table 2 - OCF device types with no AllJoyn equivalent

OCF Device Name	OCF Device Type
Receiver	oic.d.receiver
Blind	oic.d.blind
Door	oic.d.door
Garage Door	oic.d.garagedoor
Generic Sensor	oic.d.sensor
Light	oic.d.light
Smart Plug	oic.d.smartplug
Switch	oic.d.switch
Water Valve	oic.d.watervalve
Printer	oic.d.printer
Multi-Function Printer	oic.d.multifunction printer
Scanner	oic.r.scanner
Camera	oic.d.camera
Security Panel	oic.d.securitypanel
Smart Lock	oic.d.smartlock

6 Resource to interface equivalence

6.1 Introduction

312

313

314

315

316

317

321

Clause 7 captures the equivalency mapping between AllJoyn defined Interfaces (see AllJoyn Common Data Model Interface Definitions) and OCF defined Resource Types (see ISO/IEC 30118-4:2018). Detailed Property by Property mappings are provided in clause 8.

Table 3 captures the mappings for Interfaces that are part of the minimum set for an AllJoyn Device.

Table 4 captures the mappings for Interfaces that are optional for an AllJoyn Device; deep translation for these interfaces via derived modelling is not within the scope of this release of the document.

Table 3 - AllJoyn interface to OCF resource type mapping - minimum interface set

325

326

327

AllJoyn Interface	OCF Resource Type Name	OCF Resource Type ID	OCF Interface(s)
Environment.CurrentAirQuality	Air Quality Collection	oic.r.airquality collection	oic.if.s
Environment.CurrentAirQualityLevel	Air Quality Collection	oic.r.airquality collection	oic.if.s
Environment.CurrentHumidity	Humidity	oic.r.humidity	oic.if.s
Environment.CurrentTemperature	Temperature	oic.r.temperature	oic.if.s
Environment.TargetHumidity	Humidity	oic.r.humidity, oic.r.selectablelevels	oic.if.a
Environment.TargetTemperature	Temperature	oic.r.temperature	oic.if.a
Operation. Audio Volume	Audio Controls	oic.r.audio	oic.if.a
Operation. Channel	Not mapped		
Operation. ClimateControlMode	Mode	oic.r.mode	oic.if.a
	Operational State	oic.r.operational.state	oic.if.s
Operation. Closed Status	Door	oic.r.door	oic.if.s
Operation.CycleControl	Operational State	oic.r.operational.state	oic.if.s
Operation.FanSpeedLevel	Air Flow	oic.r.airflow	oic.if.a
Operation. HeatingZone	Heating Zone Collection	oic.r.heatingzonecollection	oic.if.s
Operation. HvacFanMode	Mode	oic.r.mode	oic.if.a
Operation. On Off Status	Binary Switch	oic.r.switch.binary	oic.if.s
Operation. Oven Cycle Phase	Operational State	oic.r.operationalstate	oic.if.s

Table 4 - AllJoyn interface to OCF resource type mapping - optional interface set

AllJoyn Interface	OCF Resource Type Name	OCF Resource Type ID	OCF Interface(s)
Environment.TargetTemperatureLevel	Mode	oic.r.mode	oic.if.a
Environment.WaterLevel	TBD	TBD	oic.if.s
Environment.WindDirection	Air Flow	oic.r.airflow	oic.if.a
Operation. AirRecirculationMode	Mode	oic.r.mode	oic.if.a
Operation. Alerts	TBD	TBD	TBD
Operation. Audio Video Input	Media Source List	oic.r.media.input	oic.if.a
Operation. Battery Status	Battery	oic.r.energy.battery	oic.if.s
Operation. Current Power	Energy Usage	oic.r.energy.usage	oic.if.s
Operation. Dish Washing Cycle Phase	Operational State	oic.r.operationalstate	oic.if.s
Operation. EnergyUsage	Energy Usage	oic.r.energy.usage	oic.if.s
Operation. FilterStatus	TBD	TBD	TBD
Operation.LaundryCyclePhase	Mode	oic.r.mode	oic.if.s
Operation. Moisture Output Level	Mode	oic.r.mode	oic.if.a
Operation. PlugInUnits	TBD	TBD	TBD

Operation.RapidMode	Refrigeration	oic.r.refrigeration	oic.if.a
Operation. RemoteControllability	TBD	TBD	TBD
Operation. RepeatMode	Ecomode	oic.r.ecomode	oic.if.a
Operation. ResourceS aving	TBD	TBD	TBD
Operation. RobotCleaningCyclePhase	Mode	oic.r.mode	oic.if.s
Operation. SoilLevel	Mode	oic.r.mode	oic.if.a
Operation. SpinSpeedLevel	Mode	oic.r.mode	oic.if.a
Operation.Timer	Time Period	oic.r.time.period	oic.if.s

6.2 Environment.CurrentAirQuality mapping

If more than one instance of the AirQuality interface is exposed, then each instance maps to an instance of the OCF AirQuality Resource. The mapping defined in clause 8.2 describes the population of the OCF AirQuality Resource. Even if there is only a single instance of an OCF AirQuality Resource this shall be included in an instance of an OCF AirQualityCollection. The number of links in the collection equates to the number of instances of the AllJoyn CurrentAirQuality interface that are exposed. When mapping from OCF the valueType of the Resource shall be introspected, this API is invoked only if this is set to "Measured".

6.3 Environment.CurrentAirQualityLevel mapping

If more than one instance of the AirQualityLevel interface is exposed, then each instance maps to an instance of the OCF AirQuality Resource. The mapping defined in clause 8.2 describes the population of the OCF AirQuality Resource. Even if there is only a single instance of an OCF AirQuality Resource then this shall be included in an instance of an OCF AirQualityCollection. The number of links in the collection equates to the number of instances of the AllJoyn CurrentAirQuality interface that are exposed. When mapping from OCF the valueType of the Resource shall be introspected, this API is invoked only if this is set to "Qualitative".

6.4 Operation.ClimateControlMode mapping

Climate Control Mode has three Properties; these map as follows: mode and supported modes maps to the Mode Resource, operational state maps to the Operational State Resource This can be represented in OCF either as two distinct Resource instances or a single instance with two Resource Types (oic.r.mode, oic.r.operational state).

6.5 Operation.FanSpeedLevel mapping

The setting of the FanSpeedLevel to "0x00" (off) is handled via the "OffControl" interface rather than writing directly to this interface. In such a case an instance of Binary Switch shall be exposed on the OCF side; this can be modelled as AirFlowControl which is then a collection of Binary Switch and AirFlow.

6.6 Operation. Heating Zone mapping

Each element in the array of heating zones within the AllJoyn HeatingZone interface maps to an instance of OCF HeatingZone, itself a link in an instance of an OCF HeatingZoneCollection. The mapping defined clause 8.13 describes the population of the OCF HeatingZone Resource that constitutes the Resources that are contained in the collection.

6.7 Operation.OnOffStatus, Operation.OnControl, and Operation.OffControl mapping

A discovered instance of a Binary Switch is always mapped to an Operation.OnOffStatus interface. A RETRIEVE on a Binary Switch maps to an action on an instance of an Operation.OnOffStatus Interface. An UPDATE on a Binary Switch maps to a method invocation on either Operation.OnControl or OffControl. value = true maps to Operation.OnControl value = false maps to Operation.OffControl.

6.8 Operation.OvenCyclePhase

OvenCyclePhase cyclephase Property pre-defines values 0x00-0x7F, 0x80-0xFF is for vendor specific values. The mapping defined in clause 8 covers only specification defined values. Any vendor defined value shall be represented in OCF using the x.<organization> syntax for a vendor defined Property.

7 Detailed mapping APIs

7.1 Introduction

365

370

371

378

379

380

382

- This clause provides a mapping description (using JSON that aligns with the Derived Modelling syntax described in Derived Models for Interoperability between IoT Ecosystems for all Interfaces and Resources that are within scope.
- The derived model definitions presented in clause 8 are formatted for readability, and so may appear to have extra line breaks.
- Table 5 provides a reference and link to the per Interface clauses.

Table 5 - Interface to resource summary

AllJoyn Interface Name	Equivalent Resource(s)	Clause
Environment.CurrentAirQuality	oic.r.airqualitycollection	8.2
Environment.CurrentAirQualityLevel	oic.r.airqualitycollection	8.3
Environment.CurrentHumidity	oic.r.humidity	8.4
Environment.CurrentTemperature	oic.r.temperature	8.5
Environment.TargetHumidity	oic.r.humidity, oic.r.selectablelevels	8.6
Environment.TargetTemperature	oic.r.temperature	8.7
Operation. Audio Volume	oic.r.audio	8.8
Operation.ClimateControlMode	oic.r.mode, oic.r.operationalstate	8.9
Operation. Closed Status	oic.r.door	8.10
Operation. CycleControl	oic.r.operational.state	8.11
Operation.FanSpeedLevel	o i c. r. airflow	8.12
Operation. Heating Zone	oic.r.heatingzonecollection	8.13
Operation. HvacFanMode	oic.r.mode	8.14
Operation. On Control, Operation. Off Control	oic.r.switch.binary	8.15
Operation.OnOffStatus,	oic.r.switch.binary	8.16
Operation. OvenCyclePhase	oic.r.operationalstate	8.17

7.2 Current Air Quality

7.2.1 Derived model

The derived model: "asa.environment.currentairquality".

7.2.2 Property definition

Table 6 provides the detailed per Property mapping for "asa.environment.currentairquality".

Table 6 - The property mapping for "asa.environment.currentairquality".

AllJoyn Property name	OCF Resource	To OCF	From OCF
minvalue	oic.r.airqualit y	range[0] = minvalue	minvalue = range[0]
maxvalue	oic.r.airqualit y	range[1] = maxvalue	maxvalue = range[1]
contamina nttype	oic.r.airqualit y	valuetype = Measuredcontaminanttypearray = [CH2O,CO2,CO,PM2_5,PM10,VOC] ocf.contaminanttype = contaminanttypearray[contaminantt ype]	contaminanttype = indexof contaminanttypearray[ocf.c ontaminanttype]
currentval ue	oic.r.airqualit y	contaminantvalue = currentvalue	currentvalue = contaminantvalue
updatemin time	oic.r.value.co nditional	ocf.minnotifyperiod = updatemintime	updatemintime = ocf. minnotifyperiod
precision	oic.r.airqualit y	ocf.precision = precision	precision = ocf.precision

Table 7 provides the details of the Properties that are part of "asa.environment.currentairquality".

Table 7 - The properties of "asa.environment.currentairquality".

AllJoyn Property name	Туре	Required	Description
minvalue	number	yes	
maxvalue	number	yes	
contaminanttype	integer	yes	The contaminant type
currentvalue	number	yes	
updatemintime	integer	yes	
precision	number	yes
